Create a flowchart that will process numbers in a file.

 You will open the file, process the records and close the file.

The flowchart will total up the numbers in the file.

 When reading the file, output the contents from the file.

When done:

Show total for the file and count number of records processed.

Download file from Blackboard

Example:

Number from file: 999

Number from file: 999

…

Number from file: 999

- - - - - - - - - - - - - - -

Total: 999

- - - - - - - - - - - - - -

Number of records processed: 999
